A Celebration of Sustainable Living

A festival that celebrates today to help bring about a better tomorrow.

A tomorrow where we actually use the technology available now to generate electricity in our own homes instead of fearing the next electricity bill.

A tomorrow where we appreciate our gardens not just for their beauty, but for what they can provide in food.

A tomorrow when rising fuel costs persuade folks to treat driving and flying as the luxuries they really are, but where modern technology enables us to work locally and be noticed globally.

This is not a time for despair or denial. It is a time to realise what we already have and learn how we can use our innovation and imagination to live a full and wonderful life that works with our planet and not against it.
